		Use	Group controller allows to control a group of local controllers. Thanks to the use of a group controller, it is possible to raise and lower several roller blinds simultaneously from one place. The controller can operate roller blinds from one room (e.g. living room) or a group of rooms (e.g. ground floor, first floor or the sunniest room). By installing the controller by the bed in the bedroom or by the sofa in the living room, we will be able to lower and raise the blinds without having to interrupt the rest. Additionally, the group controller can act as a central roller blind controller.
